

Augusoft Releases Version 7.1 of Lumens[®] with Improved Products for Corporate Education Programs

New version of Lumens also features updated style, usability and reporting functionality

Minneapolis – July 18, 2011 – Augusoft[®] announced the availability of version 7.1 of Lumens[®] featuring enhancements to Lumens Business-to-Business (B2B) and Lumens Entrepreneur (ENT) for corporate education programs. V7.1 also includes significant updates to the style, usability and reporting functionality in all Lumens products.

“Version 7.1 is the first phase of redesigning the user interface in Lumens to incorporate many of the features and functionality our customers have requested with regards to style and usability,” said Paul VanderWaal, Director of Information Technology at Augusoft. “With V7.1, users now have the ability to create a course draft and will see more visible changes to screen layout and design. We will be making additional improvements to the look and feel of Lumens in future versions.”

B2B Enhancements

With the enhanced version of Lumens B2B, program staff can now easily build proposals by leveraging course profiles already developed. Contract training classes can be cloned, or partially created and saved as a draft. Contract edit protocol has been relaxed to allow for changes to items even after the contract has been signed. Additional features have been added that allow staff to add new contact or vendor profiles from any screen. In addition, contracts have been designed to provide customers with more flexible accounts receivable posting options.

“The cry for a corporate education solution that goes beyond homegrown ‘systems’ comprised of Word documents and Excel spreadsheets has been loud,” said Leslie Larrabee, Executive Director of California Corporate College. “The enhanced version of Lumens B2B is a comprehensive and robust solution designed by and for contract training programs, and the only system that integrates LERN best practices.”

Lumens B2B works as a stand-alone solution to manage all aspects of a corporate education program or bundles with Lumens PRO to create Lumens ENT, which manages both corporate education and open enrollment programs.

“A traditional college enrollment system isn’t as user-friendly as Lumens nor does it have the components to meet the needs of what we are doing in non-credit corporate and workplace training,” said Evelyn Dow-Simpson Associate Director, Workforce Training Center Central New Mexico Community College. “As a member of the Lumens Product Advisory Board, we are constantly asking for new features to Lumens based on user and customer feedback. We value the continued support and appreciate the favorable and rapid response we receive from Augusoft.”

Updated Style, Usability & Reporting Features

As part of an ongoing redesign of the Lumens interface, V7.1 includes updates that make it easier and faster for program staff to find the information they need on the pages within Lumens. These style, usability and reporting features are incorporated throughout all Lumens products. In addition, enhancements to the reporting engine further improve its ease of use, including the ability to generate a simple OneClick report.
