

Augusoft Lumens® D2L Brightspace Integration

augusoft.net/lms

Augusoft®

Augusoft® is the provider of Lumens®, the first cloud-based enrollment management software designed for continuing education.

“Through the use of real-time integration between Lumens and learning management systems from D2L/Brightspace, Canvas and Blackboard, your students can immediately begin taking their class after completing their registration in Lumens. No need to wait for other batch processes to run, and no staff time wasted doing double-entry.”

Paul VanderWaal
Director of Information Technology
Augusoft, Inc.

Increase Productivity with Integration

Your institution already uses a top-of-the-line **Learning Management System (LMS)** to give your students a successful learning experience. Empower your staff for success by integrating your LMS with Augusoft Lumens®.

How it works

Lumens works with D2L Brightspace to sync classes, instructors, student registrations, voided transactions and cancellations.

Benefits

- ▾ Increased staff efficiencies
- ▾ Eliminates duplicate entry work
- ▾ Automatically enrolls students into LMS class
- ▾ Capability to access LMS class from Lumens

Commonly Asked Questions

Is the class created in the LMS when the Lumens class is submitted?

When the Lumens class is submitted with D2L Brightspace selected for the LMS Delivery, the class is created in Brightspace. For all classes, even though an existing “Course Offering” can be used, unique “course section” will be created inside that offering for the Lumens class.

Are instructors synced in Lumens and the LMS?

When an instructor is assigned to an LMS Delivery = D2L Brightspace class in Lumens, the integration will check if the instructor exists in Brightspace. If the instructor exists, they will be enrolled in the Brightspace class as faculty. If the instructor does not exist in Brightspace, they will be created and then enrolled in the Brightspace class as faculty.

Upon registration in Lumens, will the student be automatically enrolled in the Brightspace class?

When a student is registered into an LMS Delivery = D2L Brightspace class in Lumens, the integration will check if the student exists in Brightspace. If the student exists, they will be enrolled in the Brightspace class as a student. If the student does not exist in Brightspace, they will be created and then enrolled in the Brightspace class as a student.

During a Lumens transfer scenario, if the 'Transfer In' class has LMS Delivery = D2L Brightspace, the integration will treat it as any other registration.

If a Lumens class does not have D2L Brightspace indicated for LMS delivery, and if registrations occur, then the class is updated for LMS Delivery = D2L Brightspace. The students will integrate to Brightspace at the time of submission of the class in Lumens.

Will a canceled student in Lumens also be canceled in the LMS?

If a student is cancelled from a class in Lumens with LMS Delivery = D2L Brightspace, the integration will disable the student in the Brightspace class.

During a Lumens transfer scenario, if the 'Transfer Out' class has LMS Delivery = D2L Brightspace, the integration will treat it as any other cancellation.

What happens if a registration transaction is voided in Lumens?

If a registration transaction is voided in Lumens with LMS Delivery = D2L Brightspace, the integration will remove the student from the D2L class.

How does a student access their Brightspace class?

While in Lumens, students can go to their current registration, then click on "go to class". This will bring them to the login screen of their Learning Management System.
